- ✓ Economical drive reduces energy costs by adjusting motor speed to the required flow of air or fluids
- ✓ Can also lower your installation costs by eliminating throttling valves, dampers or inlet guide vanes typically used to control the flow of fluids
- ✓ Building occupant comfort is maximized with accurate flow control
- ✓ Small size saves valuable panel space Local / Remote button allows quick start-up
- ✓ Includes a full complement of integrated building automation networks
- ✓ Optional remote mount English text keypad speeds troubleshooting
- ✓ Reduced harmonic technology eliminates the need for line reactors and reduces both wire size and upstream over current protection devices, further saving panel space and lowering component cost
